WILLIAM T. LARKINS

A-20 PRODUCTION LIST

After starting life as the DB-7B3 for the French Air Force the A-20 soon became a production light bomber for the U.S. Army. Eight of the A-20B models (41-2771/2778) were built for the U.S. Navy as BD-2's. All were built by Douglas, Santa Monica, except A-20C's 41-19589/19728 which were built by Boeing, Seattle.

The 1939 production batch included three photo-reconnaissance F-3's (39-741, 745, 748), and several P-70 night fighters (39-735/740, 742/744, 746/747 and 749/797). The P-70 is easily recognized by its short nose, as seen in the photo of 39-737. All P-70A and P-70B types were modified A-20's and thus do not have separate serial numbers. Several became trainers, for example TP-70B-2-DO 43-10003, and P-70B-2-DO 43-10230 shown on the photo page. Many A-20's were exported to the Royal Air Force, both on direct sale and by Lend-Lease.
